

PRESS RELEASE

ASLAN presents removable etch glass films for temporary decorations of glass surfaces

Glass decoration films are sometimes only applied for short periods of time, for example when used for exhibition graphics or retail shop window promotions, even christmas decorations and temporary privacy applications. These graphics can then be very difficult to remove which is both time consuming and costly so in these cases a material is required that can be removed quickly without leaving any residue.

Specialist self-adhesive film producer ASLAN is pleased to announce the launch of 2 new easily removable etch glass films that offer the solution to this problem.

ASLAN DFR 300 is a polymeric PVC film with a fabulous etch glass effect. Compatible with all solvent, eco solvent, uv and latex inks, this digitally printable etch vinyl is available in 1,370m x 50m rolls.

ASLAN ER 150 is a glass effect film that offers the advantage of being shrink resistant. So it allows for great looking long term applications that remove easily and leave no residue. This product is not printable and is offered at 1,26m x 50m.

Both new etch glass films have a thickness of approx. 160 µm and are to be dry applied only. After 12 months both products can be removed easily from all glass surfaces without leaving any residue.

For detailed product information please contact ASLAN directly or visit www.ASLAN-schwarz.com
