

PRESS RELEASE

That's a bit thick!
600µm PVC-film complements ASLAN sandblasting range

Deep sandblasting works on stone are a real challenge for sandblasting films due to the high pressures evolving. The innovative ASLAN S 62 is especially designed to withstand these forces.

The extraordinary thickness of this 600µm PVC film combined with the strong adhesive fulfills highest standards and allows exactly outlined letterings and reliefs on polished and rough stone. Furthermore the film offers many characteristics that ease the manufacturing process. The soft and nice quality is writable and possible to cut by hand or with a cutting plotter. Inaccurate application or bubbles under the film are immediately visible due to the translucency. Additionally it is removable without leaving any residues or discolourings on stone surfaces.

ASLAN is once more proving its competence in stencil films for special needs by introducing the new ASLAN S 62 which is available in 10 m x 1,25 m and 10 m x 0,625 m.

More detailed information about this and all other products of the ASLAN range can be requested directly at ASLAN or on the news site under www.aslan-schwarz.com.

ASLAN S 62 – sandblasting film for deep sandblasting works on polished and rough stone
